SENSING TECHNOLOGIES™

MOUSE iQ TRAP

- This intelligent, Bluetooth-enabled mouse trap allows pest control professionals to check traps from up to 100 feet away using the Bell Sensing app.
- Built for precision, safety, and speed, Mouse iQ reduces time spent on inspections while helping technicians work more efficiently, even in hard-to-reach areas.
- With a weather-resistant housing and compact design, the trap can be discreetly placed in high-activity zones like suspended ceilings, rafters, and along heating vents. By logging time-stamped rodent activity, it delivers actionable data without disrupting your service schedule.

Part of the Pulse iQ® family, the Bell Mouse iQ® brings advanced sensing technology to professional rodent control.

Take the guesswork out of your service

What if you knew every rodent activity at your account – from the moment you walk in the door?

iQ™ technology will transform your technicians from inspectors into problem solvers, fixing issues at accounts faster and smarter.

The iQ™ variant traps will seamlessly sync with the Bell Sensing Technologies smart phone app and portal.

- The powerful system requires no gateways or complicated and costly infrastructure
- Highly customized Bluetooth® sensors allow data to be quickly gathered onsite from each iQ™ device. This is then uploaded to the cloud directly from a smartphone
- A complete rodent data gathering and management system with the ease of using it on any account
