

Harmonix[®]

Rodent Paste

A high performance ready-to-use non-anticoagulant rodenticide bait containing Cholecalciferol 0.077 % w/w (0.075 % w/w pure) for the control of rats and mice for the protection of public health, stored products and materials. The product contains a bittering agent and a dye.

IRELAND: For trained professional users **GB:** For professional users with demonstrated competence (equivalent to trained professionals).

For indoor use, outdoor around buildings and outdoor open areas and waste dumps in bait stations, covered and protected baiting points. Direct application of ready-to-use bait into the burrow for outdoor around buildings and outdoor open areas and waste dumps.

To be used only by professional users holding certification demonstrating compliance with U.K. rodenticide stewardship regime requirements. Read the label before use. Using this product in a manner that is inconsistent with the label may be an offence.

Refer to the CRRU UK Code of Best Practice for guidance.

When this product is supplied to a user for the control of rodents, it shall only be supplied to a professional user holding certification demonstrating compliance with UK rodenticide stewardship regime requirements.

Proof of competence: Trained professional users must register with DAFM as a 'Trained Professional - Pest Management Professional' (PMU) and must present their PMU No. at point of sale to purchase this product for use only as specified on the label. This product should only be used in accordance with a code of best practice such as the CRRU Ireland Best Practice Requirements for Rodent Control and Safe Use of Rodenticides. Follow any additional instructions in that code of best practice.

Use Biocides Safely and Sustainably.

Not for sale to the general public or any person other than trained professionals (professional users with demonstrated competence in the UK).

It is illegal to use this product for uses or in a manner other than that prescribed on this label.

 Cholecalciferol (CAS 67-97-0)
No hazard label for supply/use required.

Authorisation number: UK-2020-1266; IE/BPA 70695

5 kg e

02/7/21 - A3

A ready-to-use rodenticide bait containing Cholecalciferol 0.077 % w/w (0.075 % w/w pure).

AUTHORISED USES:

GB, NI and IRELAND

Harmonix Rodent Paste controls:

- House Mice (*Mus musculus*)
- Norway Rats (*Rattus norvegicus*)
- Black Rats (*Rattus rattus*)

For trained professional users

For professional users with demonstrated competence (equivalent to trained professionals)

Indoor use, outdoor (around buildings) and outdoor (open areas and waste dumps).

APPLICATION METHOD:

GB, NI and IRELAND

Baiting for Mice: 20 g (1 sachet) bait per baiting point depending upon infestation level. The minimum distance between baiting points should be 5-20 linear metres (in case of a low infestation) and 2-5 linear metres (in case of a high infestation).

Refill an amount of 20 g (1 sachet) to a bait point if bait has been totally consumed within one control interval.

Baiting for Rats: 100-200 g (5-10 sachets) bait per baiting point depending upon infestation level. The minimum distance between baiting points should be 10-20 linear metres (in case of a low infestation) and 3-10 linear metres (in case of a high infestation). Refill an amount of 200 g (10 sachets) to a bait point if bait has been totally consumed within one control interval.

GB, NI and IRELAND

Indoor use, outdoor (around buildings) and outdoor (open areas and waste dumps).

Target organism	Dose (per baiting point)	Level of infestation	Distance between baiting points – tamper resistant bait stations or covered and protected baiting points
Mice	20 g (1 sachet)	High	2-5 linear metres
		Low	5-20 linear metres
Rats	100-200 g (5-10 sachets)	High	3-10 linear metres
		Low	10-20 linear metres

GB, NI and IRELAND

For trained professional users For professional users with demonstrated competence (equivalent to trained professionals)

Direct application of ready-to-use bait into the burrow (outdoor around buildings and outdoor open areas and waste dumps only): Baits must be placed to minimise the exposure to non-target species and children. Cover or block the entrances of baited burrows to reduce the risks of bait being rejected and spilled.

Permanent baiting: should be done around nesting sites, entry points or immediate vicinity of buildings using the same amount of bait per baiting point. Sites under a permanent baiting regime should be inspected regularly. The period between visits should be determined by the technician in charge but will not be longer than every four weeks when permanent baiting is conducted outdoors. For permanent baiting follow any additional instructions provided by the CRRU Guidance on Permanent Baiting...
