

## A highly palatable soft wax formulation for use as part of a professional rodent monitoring programme

sakarot<sup>®</sup>  
**MONITORING BAIT**

Sakarot Monitoring Bait is a pesticide-free highly palatable soft wax formulation for use as part of a professional rodent monitoring programme, where it is necessary to confirm rodent activity before carrying out a baiting programme. The product is designed for use in semi-permanent bait stations. Sakarot Monitoring Bait can be used both inside premises and outdoors.

### DIRECTIONS FOR USE

To be used by application through a skeleton or caulking gun. Take the Sakarot Monitoring Bait tube and cut off the plastic dome end above the screw thread, take care not to damage the thread itself. Cut down a plastic nozzle to at least half its length to give a bait worm of 1cm minimum diameter. Screw the cut-down nozzle onto the wax bait tube. Position the tube into a caulking gun.

Dispense into suitable bait stations such as those from the AF<sup>®</sup> Range.

**Mice Application rate for each bait point:** Apply 2-5cm (2-5g) of bait per bait point. Bait points 2-5m apart. (5cm = 5g).

**Rat Application rate for each bait point:** Apply 4-8, 15cm lengths of bait of 1cm diameter. 50-100g of bait per bait point approx 5-10m apart.

Inspect the bait points regularly and if rodent activity is found (as indicated by a take of Sakarot Monitoring Bait), remove and safely dispose of the monitoring bait before replacing with a conventional rodenticide, such as Sakarot D Wax Bait. Use Sakarot D Wax Bait in accordance with the label.

Once the rodent activity has ceased, subsequent monitoring with Sakarot Monitoring Bait can recommence as above.

### PRECAUTIONS

- **WEAR SYNTHETIC RUBBER/PVC GLOVES** when working in rodent-infested areas.
- **KEEP OUT OF REACH OF CHILDREN.**
- **KEEP IN ORIGINAL CONTAINER** in a safe place.
- **EMPTY CONTAINER COMPLETELY** and dispose of safely.
- **READ SAFETY DATA** sheet before use.
- **DISPOSAL, PPE AND OTHER ADVICE** - See safety data sheet.

### NOTES

1. For ease of application allow tubes which have been stored at low temperatures (less than 5°C) to warm for ½ hour to room-ambient (10-18°C) before using.
2. Cover the nozzle tube end when not in use, release the caulking gun pressure to prevent leakage.

### USE ONLY IN ACCORDANCE WITH THE DIRECTIONS ON THIS LABEL
