- * FOR INDOOR USE ONLY.
- * FOR USE ONLY BY PROFESSIONAL OPERATORS.

DANGER

CHARACTERISTIC

VAZOR FUMIGATOR is a novel process for insect control easy to use and technologically innovative. This novelty allows to totally eradicate insects by diffusing a dry smoke which is rapidly spread throughout the premises to be treated. The very fine particles of smoke can penetrate every crack and crevice, eliminating insects wherever they hide out. **VAZOR FUMIGATOR** has a delayed diffusion of the active compound. The smoke being emitted only 30 seconds after the fumigator is activated by water. This makes the product very safe to use by allowing the operator not to be in contact with the generated smoke. No risk of fire or explosion. Efficacy is fast and complete; the smoke released does not produce stain or residues on to surfaces.

DIRECTION OF USES AND DOSE RATES

Remove animals, including fishes and fragile plants from the area to be treated. Close doors and windows opening on the outside. Open doors, cupboards and drawers inside the premises. Place the plastic cup in the middle of the area, pour in some water up to the indicated level, tear off the aluminium envelop containing the tin can and place the can with the red face upward.

The smoke is released after 30 seconds minimum. In the event of large areas, use several fumigators and activate first those that are the farthest to the exit.

Nobody must be in the treated room during the fumigation.

Let the fumigator act in the closed premises for a minimum of 2 hours, for better eradication leave it for 4 hours. When re-entering the premises

open widely doors and windows to allow the air to be renewed for 10 to 15 minutes at least.

DOSE RATES

Size of fumigator	Crawling insects	Flying insects
10g	55m ³	110m ³
